

# Connect 430

## Product Information Sheet

Engineered specifically for the insurance and fleet sectors, the Connect 430 is a compact and robust device which is designed to be quickly and easily hard-wired to a vehicle including a self install option. Through deep CANbus connectivity, it provides rich insights into driver behaviour and vehicle status, as well as highly-accurate GPS location data.

### Insurance approved

The Connect 430 is approved and used by insurance companies for young driver and usage-based insurance policies.

### Small but powerful, with Bluetooth connectivity

Despite its small size, the Connect 430 has a powerful processor to provide precise GPS locations, and communicates over the GPRS network utilising complex data sets. The Connect 430, depending on variant, has Bluetooth Low Energy (BLE) capabilities allowing it to interface with Trakm8 BLE accessories.

### Certified with flexible installation options

The Connect 430 is certified and E-Marked with all the IP, design, development and manufacturing owned by Trakm8 and managed in-house. The Connect 430 offers various flexible installation options dependent upon the client's needs.

### Monitor fleet activity

The Connect 430 houses a tri-axis accelerometer, providing detailed information about vehicle activity, driver behaviour and crash analysis. Through CANbus connectivity it also supplies data on vehicle status and health, such as true ODO readings, accurate fuel levels, and dashboard warning lights.

### Commercially flexible

Trakm8 manufactures multiple variants of the Connect 430, enabling us to tailor a commercially-flexible solution package specific to your needs.

## Specifications

### Connectivity

GPS Location Technology  
2G Communications  
Vehicle CANbus Interface  
Bluetooth Low Energy (BLE 4.2)

### Weight

57g

### Dimensions

LxWxH:  
115mm x 45mm x 19mm

### Enclosure

Fire-resistant PVC black casing

### Certification

CE and R&TTE and E-Mark
